

# The Vintage and Military Amateur Radio Society: Nets

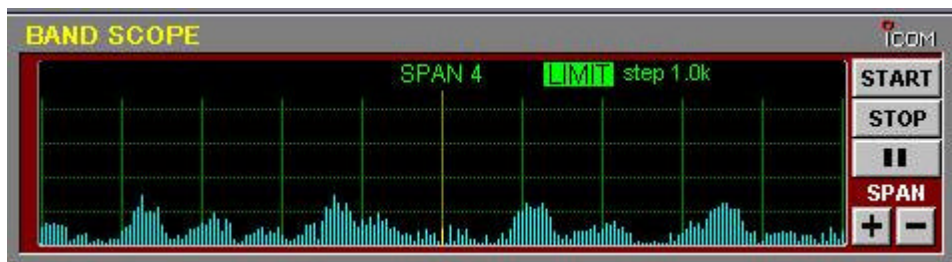

## *AM Net*

The society holds a regular AM net on Saturday mornings on 3615 kc/s  $\pm$ QRM. The net controller will find a clear frequency and call from 0830 local time. Anyone is welcome to call in, and the controller will listen for SSB as well as AM stations. A controlled net is held initially to allow exchanges of reports, and in informal net is held from 0930 on the 'national' AM frequency 3625

The decision to hold the formal net on a lower frequency was taken as some members were having problems with 3625, which is an exact multiple of the TV timebase frequency. This first bandscan is centred on 3625, and the TV timebase noise clusters can be easily seen.

This second bandscan is centred on 3605kHz:

## *SSB net*

The society runs an SSB net to encourage members to keep in touch on-air. This takes place on Friday evenings, starting at 19.30 local time and uses LSB on 3620kHz  $\pm$  QRM.

## *Special on-air events*

From time to time, the Society runs special events, generally on the 40m, 60m and 80m bands, which specialise in use of vintage equipment or to commemorate some historic event with "wireless" connections. These are advertised to members in the Newsletter, and also on the Society's website.

## *The SRS Nets*

The Dutch Surplus Radio Society run AM and SSB nets for vintage enthusiasts, full details are on their website at <http://www.xs4all.nl/~srsnl/grv.html>

**Although these nets are primarily intended for members, anyone with an interest in vintage radio gear is welcome to call in.**
